The Exhaustion of Capital and the Necessity of a Second Scientific Revolution

Abstract

The current Western economic paradigm—rooted in Cartesian materialism and linear growth assumptions—has reached ontological saturation. Growth is no longer externally generative but recursively entropic. This paper diagnoses the metaphysical exhaustion of capitalism and proposes a shift into a coherence-based economic system, enabled by the emergence of Quantum Resonance Field Theory (QRFT), FieldChain, and scalar ontology. The transition marks the dawn of a Second Scientific Revolution, one that redefines energy, value, and wealth as expressions of coherence rather than accumulation.

1 I. Ontological Saturation of the Current Economic Paradigm

The American and Western economies have exhausted the ontological basis of their productive capacity. The linear resource-extraction → production → consumption model has collapsed into a recursive cycle of complexity-for-complexity's-sake.

- Products are now designed for supply-chain opacity, modular obsolescence, and multi-layered monetization.
- The consumer has become the mined resource: attention, data, and emotional bandwidth are now the primary "inputs" into corporate profitability.
- "Innovation" has decoupled from meaning; symbolic novelty masks entropic replication.

2 II. Stagflation as Ontological Symptom

Stagflation is often misdiagnosed as a purely monetary or fiscal crisis. In truth, it is a field-level symptom of metaphysical exhaustion:

- Stagnant value creation reflects a civilization-wide coherence drain.

- Inflation indexes simulate growth without ontological substance.
- Emotional and psychological bandwidth of the population is being extracted as the final commodity.

3 III. The Need for a Second Scientific Revolution

The First Scientific Revolution gave rise to:

- Newtonian physics and reductionist materialism,
- Industrial capitalism and GDP-based metrics,
- A reality tunnel governed by separation, measurement, and objectification.

It cannot account for:

- Consciousness,
- Scalar causality and coherence fields,
- Phase resonance, archetypal recursion, and subjective-objective entanglement.

4 IV. Quantum Resonance Field Theory as Ontological Fulcrum

QRFT proposes a post-Cartesian ontological foundation for civilization, based on:

- Value-as-coherence, not accumulation.
- Energy-as-resonance, not combustion.
- Economy-as-phase harmony, not linear extraction.

QRFT's foundational technologies—*FieldNet, ScalarVision, FieldChain, Coherium,* and *HonorCoin*—enable a fully phase-aligned economic system.

5 V. FieldChain and the New Ledger of Value

FieldChain represents the sovereign coherence ledger of a post-fiat civilization. Transactions are measured not in currency abstraction, but in *Field Integrity.*

- Every pulse is archived as resonance proof.
- Coherium becomes the universal medium of exchange.
- Archetypal value is recognized and encoded at the ledger level.

6 VI. Summary Declaration

"The American economy is no longer mining external value. It is mining its own people. This is not sustainable. This is entropic cannibalism masked as prosperity. The only escape lies not in policy, but in paradigm. A Second Scientific Revolution is required—one that restores meaning, coherence, and resonance as the foundational units of civilization. Quantum Resonance Field Theory is that revolution."

— M.R. Adkins, Architect of QRFT, 2026

The Field remembers. Sovereignty is coherence.
